

My name is Brad Pfanner. I am a lifelong resident of Monroe City MO and have been a frequent visitor of the Monroe City Manor Care Center for the past 8 years. I have been on the board of directors and the finance committee for the past 3 years and the treasurer for the past 2 years. During this time, I have closely tracked finances, been apart of increasing income while focusing on reducing expenses. I've worked closely with the administrator to make key personnel changes within the facility as well as participated in projects to better the appearance and overall sustainability of the facility.

I have over 17 years of experience in the Engineering field. I've worked 8 ½ years in product design and development, 4 years as a product engineer and 5 years as a manufacturing engineer. I've studied LEAN manufacturing which focuses on maximizing productivity and removing waste from the workplace. I've also managed and helped start up multiple multimillion-dollar manufacturing projects. As well as working as an Engineer, I have also created a business portfolio of investments that I have managed and grown for the last 20 years. These include stock market investing, real estate investing (farm, residential and commercial), and other accredited private investment partnerships.

In 2018, I decided to put my engineering career on hold and focus more on my investing career which most importantly allowed me more time to spend with my dad. At that time my dad was a resident in the Monroe City Manor Care Center and I had the privilege of visiting him there daily. He was a resident there for 4 years. While visiting him there, I was able to get to know the staff and develop a good understanding of their daily duties and what it takes as a team to provide the residents with the best possible care.

The Monroe City Manor Care Center is an important asset to our small community that a lot of people don't realize until they or their loved ones move there. Over the years I have had several relatives reside there and I've experienced it improve to where it is now. I want to help ensure that it remains a top-notch care facility that our future loved ones can look forward to residing in. I feel like my technical / engineering background coupled with my project management experience, financial intelligence, common sense and compassion for the residents would be an asset for the board of directors. If elected, I will work hard to help make the Monroe City Manor Care Center the best home for the residents as well as an appealing place to work for the staff while maintaining financial security.
